Learning Outcomes

#	Learning Outcome
1	realize experimentally processes of total surface area measurement and pore characterization of a porous solid sample with Gas Sorption Analyzer.
2	realize experimentally the processes of hydrodynamic size measurement, zeta potential measurement, and molecular weight measurement of proteins, polymers, and nanoparticles using Particle Size/Molecular Weight/Zeta Potential Analyzer.
3	organize both theorically and practically the processes of Thermogravimetric Analysis, Differential Thermogravimetric Analysis, and Differential Scanning Calorimetric Analysis concerned with a sample.
4	identify topographic three dimensional images of surface of solid sample using Atomic Force Microscope (AFM).
