Learning Outcomes

#	Learning Outcome
1	This course introduces students to the field of auditing and assurance. It provides students with a sound understanding of fundamental auditing concepts and procedures, and the application of auditing standards. Consequently, the course provides a foundation for students who intend pursuing a specialised pathway in the auditing profession, as well as those who will pursue careers in accounting and other disciplines where principles of risk assessment, systems control and evaluation, and transaction testing are important. While the course focuses mainly on the practical application of an external financial audit that is regulated under legal legislation, it also explores the wider audit and assurance framework; including the internal audit function, and some environmental auditing issues. In addition the course seeks to stimulate a critical appreciation of contemporary auditing and assurance issues.
